

Micro CCTV Cameras

These tiny cameras can sit on the tip of your finger with size being only 9.5X9.5X12mm with 520 TVL . These are the smallest CCTV cameras in the world. They are supplied in two designs, one operating with DC 5V supply and the other operating with DC 12V supply.

They are ultra high definition CCTV cameras with excellent night vision and therefore can view subjects almost in complete darkness. They are ideal for secret surveillance in offices, homes and factories and can be linked to video time-elapse recorders or using special Santo software, they can be linked to desktop or laptop computers with viewed images stored in the hard-disks for periods extending to several months.
